PROJECT HISTORY

Food Vending Machine

In this project, I used C# to develop a user-friendly vending machine solution. This allows customers to easily purchase food.

Clarification: shishir1290/Food-Vending-Machine

E--commerce site

In this project, I used HTML, PHP, CSS, JS, and MySQL to create a user-friendly e-commerce website. Customers can easily create accounts, search for products, and make purchases. The website is hosted for free on ooowebhost.com, allowing anyone to view it live, though it does not have SSL certification.

Demo Live: GHORE GHORE An E-Commerce site

Computer Graphics

In this project mainly used C++ language for a better solution for designing a city view as well this one is user-friendly, and as a result, users can easily use this. This project shows a city where cars are running, rain falls, and day and night.

Clarification: shishir1290/Designing-A-City-View

AIUB Campus Life

Developed a project using Next.js and Tailwind CSS to improve campus life at AIUB. This web app gives students an easy-to-use and responsive interface to find campus events, resources, and activities, helping them stay informed and involved.
